CREATOR 1st Summer School “Plastics Recycling Processes”

Plastics recycling is an important issue, to keep the environment clean and to reduce emissions by circulating materials after their life cycle.

This summer school shows where plastic waste is generated, how the recycling process is carried out and how recyclates can be used for new products.

This project has received funding from the European Union's Horizon 2020 research and innovation programme under Grant Agreement no. 820477
